

DATASHEET ERGOSEAT NG-H

If you're looking for an efficient operator seat that enables the operator to easily find an ergonomic sitting position, you'll need the Ergoseat NG-H. We developed the Ergoseat NG-H mainly for container crane operators that look down most of the time. Its layout enables the operator to work in this position without any neck or back related health risks.

The Ergoseat NG-H has to be mounted to the ceiling of the cabin. As a result, the operator has a wider view when looking down. The adjustable armrests enable everyone, no matter their body type, to find conforming body support via the underarms, while relieving the back and neck.

SEAT
